

Activity 1-15: Parents' Ages (*cont.*)

- (a) This is a binary categorical variable. Either the person was, or was not over age 30 when his or her first child was born.
- (b) age > 30 : height = 12 (6%); age <= 30 : height = 188 (94%)
- (c) age > 30 : height = 33 (16.5%); age <= 30 : height = 167 (83.5%)
- (d) More men are over age 30 when their first child is born than women, based on this sample. Nearly 3 times as many men are over age 30 than women at this event in their lives.
